***Response to Arguments***

1. Applicant's arguments filed on 2/28/2000 have been fully considered but they are not persuasive.

Anderson teaches layered representation for image coding wherein all but the dynamic object in the foreground may be joined to form a background image mosaic, and, for example the ball traveling in the foreground associates a plurality of foreground images with a background image. Yeo teaches key frame as the first frame occurring in a segment, similar to the background mosaic image being the first frame in the sequence.
